

# Migrate Your Content to a Modern Storage Platform

Transforming aging legacy archives to the next-generation archives can be daunting and complex. Spectra Logic solutions are designed to automate the migration process from small to large-scale legacy archive systems to any of Spectra Logic's modern digital storage platforms, whether on-premise, in the cloud or a hybrid cloud model.

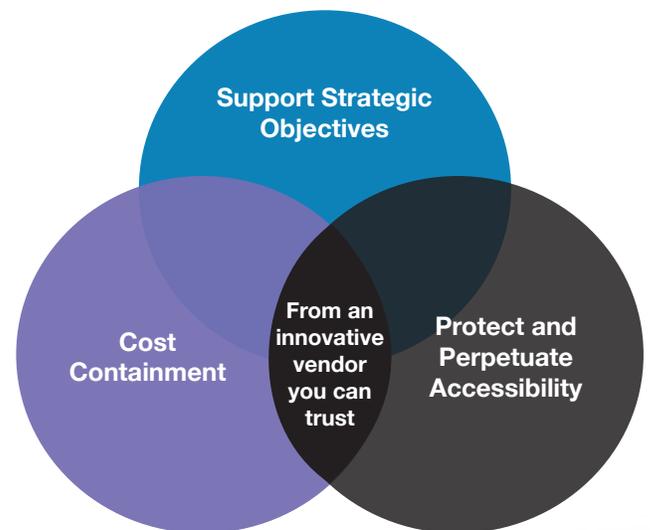

These solutions scale in size and performance to meet customers' timelines. Acutely aware of the importance of the live production process, Spectra's solutions run in the background transparently while providing access to all content, whether new, migrated, or legacy assets.

## Support Strategic Objectives

- Establish a proven path to next-generation archives and future business needs
- Leverage cloud services, workflows and disaster recovery options
- Automate future migration processes to any storage mediums (object storage disk, cloud, remote sites, or simply future generations of tape)
- Facilitate global access for collaborative workflows and business continuity planning
- Streamline workflows with one less vendor for greater efficiencies

## Cost Containment

- Eliminate traditional licensing costs (number of slots, drives, partitions, etc.)
- Lower support costs (and complexities) by eradicating an extra layer of software
- Minimize multi-vendor solution management burden and cost (eliminate a vendor)
- Jettison vendor-lock-in, for the right to change vendors at will without burden
- Proven easy deployment

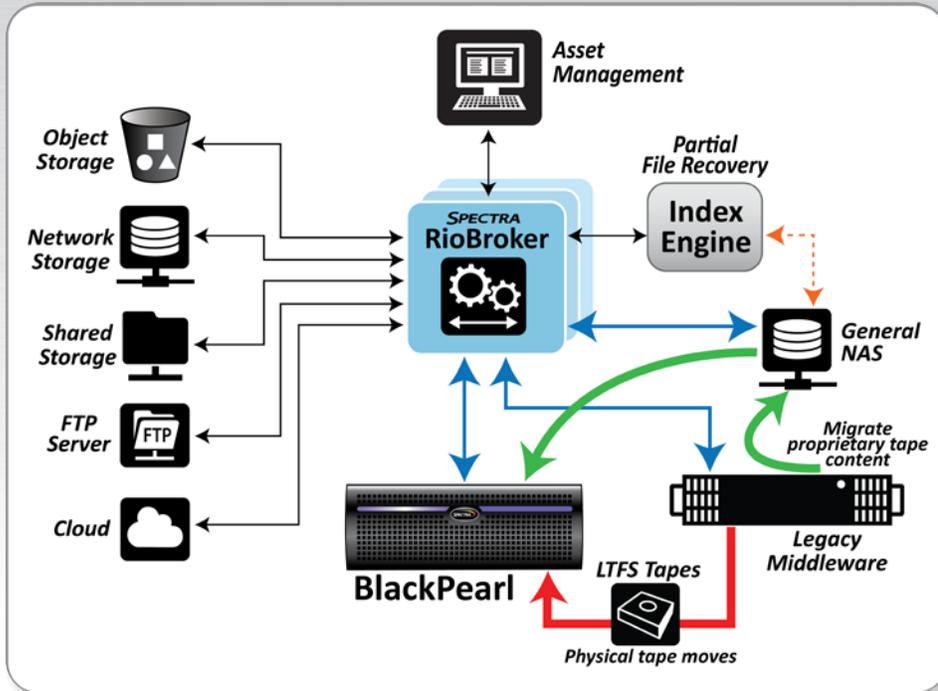

## Protect and Perpetuate Accessibility

- Shed aging architecture, proprietary formats, and static workflows
- Adopt standards-based digital solutions to guarantee access to content years into the future
  - Native format on LTF5 tape
  - Native format in the cloud
  - Open RESTful APIs

# Migrate Your Content to a Modern Storage Platform

Spectra Logic solutions provide the tools to automate the migration process from large-scale legacy archive systems to any of Spectra Logic’s modern digital storage platforms, whether on-premise, cloud, or a hybrid model.

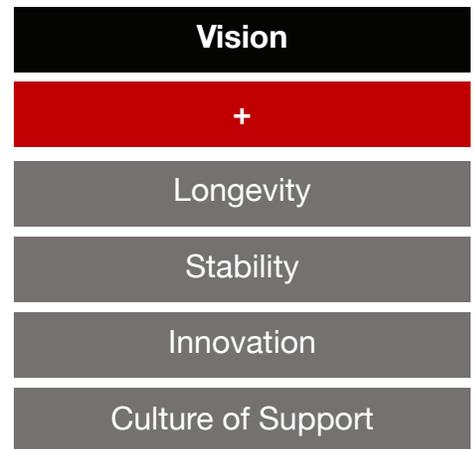

## Solution Features

- Direct import of LTFS tapes – with no data migration
- Automated, intelligent, transparent transfer of proprietary data
- Size and performance scalability to meet customer timelines
- Automated indexing of assets to support PFR
- Customizable options to fit individual customer needs
- Partial to full service options
- Simultaneous access to legacy, migrated, and new data

## Professional Services Engagement Migration Assessment and Implementation Process

- System assessment
  - Onsite evaluation of current system
  - SOW preparation option
  - Migration plan preparation: workflows, resources and hardware requirements
  - Engagement with MAM/PAM partners if needed
  - customization estimate (if any)
- Pilot/Customization
  - Prove migration strategy
  - Customize / size Spectra migration system
  - Develop scripts if needed
- Production Implementation
  - Installation, preparation and training
  - Data migration from old systems

## Why Spectra?

## About Spectra Logic Corporation

Spectra Logic develops data storage and data management solutions that solve the problem of long-term digital preservation for organizations dealing with exponential data growth. Dedicated solely to storage innovation for more than 40 years, Spectra Logic’s uncompromising product and customer focus is proven by the adoption of its solutions by leaders in multiple industries globally. Spectra enables affordable, multi-decade data storage and access by creating new methods of managing information in all forms of storage—including archive, backup, cold storage, private cloud and public cloud.
