

Distributed Multi-Cloud and Hybrid-Cloud Data Management with Spectra Vail® and Wasabi

Solution Overview

The growth of unstructured data has spread across storage formats: on-premises hardware, tape and the public cloud. Data is the lifeblood of modern organizations, and they must track and manage this data to continue to extract value from it. Spectra Vail® is a breakthrough cloud data management software solution for the multi-cloud world. Vail unifies data storage, allowing organizations to leverage on-premises applications and native cloud services, no matter where the data is created or stored. Vail presents both on-premises and cloud-based storage options within the data lifecycle policies. Copies can be made immediately or later, in any location, to any storage target or medium, and presented to the user as one simple storage system that reacts to their immediate needs.

Wasabi Hot Cloud Storage Delivers Breakthrough Efficiencies and Performance

Wasabi is the hot cloud storage company delivering low-cost, fast, and reliable cloud storage on-demand. Wasabi's solution is 80% less expensive and is faster than first-generation cloud vendors. Wasabi hot cloud storage is designed with eleven nines (99.999999999%) of object durability and data immutability that guarantees stored objects cannot be deleted or modified by anyone. Not only is Wasabi 80% less expensive to store data than traditional cloud providers, but there are also no fees for egress or API requests. Wasabi keeps all data "hot" so it can be accessed in milliseconds. All Spectra and Wasabi customers can treat their data as hot data, so they can shorten upload windows and quickly access their data for faster restore times.

Master the Hybrid Cloud with Wasabi and Spectra Vail

Vail enables organizations to extend their data center into the public cloud and unifies on-premises and cloud storage into a single namespace. Using Wasabi as a customer's public cloud destination gives customers the flexibility to access their data from anywhere. The data is available from one or multiple locations, allowing on-premises and cloud applications to use the same data without negatively impacting performance.

KEY FEATURES

- *Configurable policy engine across multiple clouds and sites*
- *Single, global namespace across multi-cloud and multi-site environments*
- *Bi-directional data synchronization across clouds and on-premises*
- *Data accessibility independent of data's physical location*

BENEFITS

- *Unify storage across on-premises and cloud (cloud, VM, on-premises)*
- *Support multi-cloud and hybrid-cloud workflows*
- *Secure, central cloud repository for long-term preservation and disaster recovery*
- *Reduce cloud storage cost and complexity*

Vail's data lifecycle management capabilities make it easy to set up robust policies to ensure data is always stored economically and efficiently.

Wasabi's low, per-TB price point also makes it ideal as an active archive destination. For prices comparable to that of cold storage, Wasabi gives Spectra users the freedom to recall their archive data from the cloud quickly and at no additional cost.

Wasabi and Spectra Vail Environment

About Wasabi:

Wasabi provides simple, predictable and affordable hot cloud storage for businesses all over the world. It enables organizations to store and instantly access an unlimited amount of data at 1/5th the price of the competition with no complex tiers or unpredictable egress fees. Trusted by tens of thousands of customers worldwide, Wasabi has been recognized as one of technology's fastest-growing and most visionary companies. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi is a privately held company based in Boston.

About Spectra Logic Corporation

Spectra Logic develops a full range of data management and data storage solutions for a multi-cloud world. Dedicated solely to data storage innovation for more than 40 years, Spectra Logic helps organizations modernize their IT infrastructures and protect and preserve their data with a broad portfolio of solutions that enable them to manage, migrate, store and preserve business data long-term, along with features to make them ransomware resilient, whether on-premises, in a single cloud, across multiple clouds, or in all locations at once.
