

Put Your Archive Back to Work

Visual archive access that makes archived media easier to find, understand, preview, and reuse.

Turn Your Archive into a Visual, Accessible Resource

Media Insight Software, part of Rio Media Suite, gives media teams a faster, more intuitive way to work with archived media — from discovering relevant content to visually confirming what they've found and retrieving what they need.

- 

Find It
Search and discover content using metadata, tagging, and AI enrichment, with associated files providing additional context around related production assets.
- 

Preview It
Use thumbnails and proxies to visually evaluate content before restoring the original media, helping users quickly confirm they've found what they need.
- 

Restore It
Select and retrieve specific portions of files with Partial File Restore, reducing unnecessary restores and data movement.

Built for Media Operations

Media Insight helps media teams extract more value from archived content.

Archive Search & Discovery

Quickly find and evaluate the content you need across large media archives, reducing the time and effort required to put archived content to use.

Content Reuse

Identify existing content and bring it back into active production workflows, helping teams get more value from archived media.

Targeted Retrieval

Retrieve only the content required without restoring entire media files, reducing unnecessary data movement and speeding access.

Business Continuity During MAM Downtime

Maintain independent access to archived media when the MAM is unavailable, enabling teams to continue finding, previewing, and retrieving content.

The Challenge

Valuable Content Shouldn't Disappear into the Archive

Media organizations retain years — even decades — of valuable media, but finding the right content can become difficult once it is archived.

Hard to Find

Limited metadata and unfamiliar filenames make relevant content difficult to locate.

Hard to Evaluate

Users must often restore media just to determine whether it contains the content they need.

Slow to Reuse

Restoring complete files adds time and unnecessary data movement before content can be put back to work.

How Media Insight Works: From Search to Restore

Media Insight brings search, metadata, visual preview, associated production assets, and targeted retrieval into an intuitive workflow — from finding archived content to restoring exactly what you need.

Media Insight transforms media from a passive archive into an active production resource, helping media teams find, evaluate, and reuse valuable content.

See Media Insight in Action

Experience Media Insight as part of Rio Media Suite and see how visual archive access simplifies finding, previewing, and restoring archived content. [Trial Rio Media Suite](#) to explore the Media Insight workflow in your own media environment.

Explore Your Archive Visually

Use thumbnails and proxies to browse, preview, and evaluate archived content. Quickly confirm what a file contains and whether it's the content you need — without first restoring the original media.

Add Context to Your Content

Gain a more complete understanding of archived content with user-generated, technical, and AI-derived metadata. Tagging, associated files, and a project-centric view bring related media and production assets together for easier evaluation.

Restore Only What You Need

Use timeline-based Partial File Restore to select and retrieve only the required portion of a media file — reducing unnecessary data movement and accelerating access to the content you need.

Flexibility and Built-In Protection

Media Insight works with customers' choice of transcoders, AI engines, and storage, providing flexibility to fit existing workflows and infrastructure. It also protects proxies and thumbnails on secondary storage, helping ensure they remain available when needed.

About Spectra Logic Corporation

Spectra Logic modernizes IT infrastructures to preserve, protect and defend data, from days to decades, whether on-premises, in a single cloud, across multiple clouds or in all locations at once. Our cost-effective solutions help organizations efficiently manage, migrate and store long-term data, from terabytes to exabytes, with features that make it ransomware resilient.
