

StrongLink® and Spectra bring machine learning to cross-platform data management

StrongLink® Cognitive Data Management Solution

StrongLink leverages the power of metadata and machine learning to deliver the first solution to automate and truly simplify storage and data management in multi-vendor storage environments. Customers can focus on using their data, and not the difficulties of managing between vendor-imposed storage silos.

StrongLink takes an innovative data-centric approach to managing your data environment and automates data classification and lifecycle management for any data, on any storage. By bridging otherwise incompatible storage platforms and virtualizing tape storage into a policy-based global namespace, StrongLink simplifies data access, data protection and cross-platform storage management.

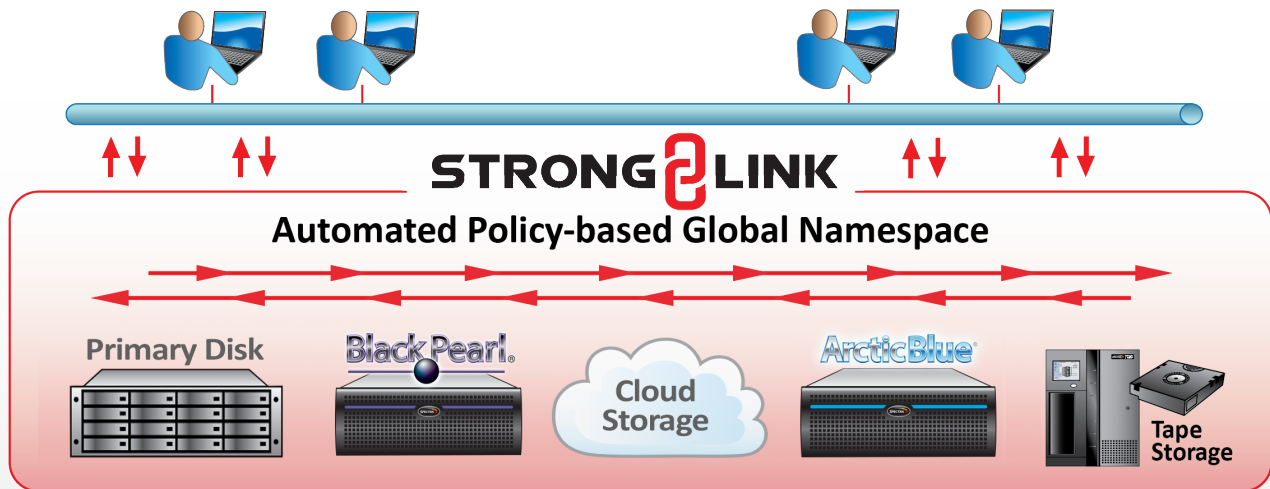

- Reduce complexity – by seamlessly optimizing data migration across multiple storage silos and the cloud without user interruption
- Reduce risk – with automated data protection, data copy management and policy-based storage automation
- Improve productivity – Users can find and access their data in a policy-based global namespace without interruption, even during data migrations or technology refresh.

Spectra® BlackPearl® Converged Storage System

Designed to meet the demands of today's high performance computing environments, Spectra BlackPearl enables users to archive assets on affordable, scalable storage. BlackPearl stores data on tiers of storage including online and nearline disk, as well as tape using open standard-based LTFS on pre-defined policies, all while assuring data integrity and availability. Desired data is automatically recalled through intelligent object storage to satisfy user requests.

BlackPearl streamlines the approach to storage infrastructure by utilizing cloud architecture, object storage and LTFS.

- Easy-to-deploy full solution with a plug-and-play model
- Seamless operation and extreme scalability
- Affordable storage that meets service-level requirements
- Ensures data security, reliability and integrity

StrongLink with Spectra BlackPearl Brings Intelligence to Data and Storage Resource Management

The full potential of BlackPearl, the most robust long-term data preservation system, is unlocked with the cognitive data management capability of StrongLink. The solution brings BlackPearl into a global namespace, and automates data and storage resource management for seamless migration and tiering without user interruption. IT administrators can focus on optimizing their infrastructure without impact to users. Users can focus on their data, and reduce the overhead of managing their storage. Most importantly, the solution will simplify storage management for archive data.
